

Leading-group coverage on plant satellites, unstable period assignment under banding.

* 2026 tools (longdust, AniAnn's) lack a banded arm and are omitted here.

Figure 4. (A) Centromere coverage and CEN180 monomer recall in Arabidopsis Col-CEN, for the six de novo and 2026 tools; Table 2 also lists mreps, NCRF and the two TRASH rows, which are omitted here. (B) Unfiltered coverage of curated maize satellite arrays. (C) Coverage lost when applying a period band.
